# Madra Adil

## Frontend Developer

Bucuresti, Romania | adilmadra9@gmail.com | +40 735 171 520 | github.com/Annubiss | madra-adil-portfolio.netlify.app

### PROFESSIONAL SUMMARY

Self-taught frontend developer working with React and TypeScript on a solid vanilla JavaScript foundation. Business Informatics student at ASE Bucharest. Built 20+ personal projects, from browser games to applications consuming REST APIs, with attention to accessibility, error handling and clean code. Looking for a junior frontend developer role in a team that does code review.

### TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3, Python (basic)

**Frontend:** React 19, React Router, Tailwind CSS v4, Context API, custom hooks, responsive design (mobile-first), accessibility (ARIA, focus management, keyboard navigation)

**Testing:** Vitest, React Testing Library, Jest

**Node.js:** CLI applications with structured, modular logic

**Tooling:** Vite, Git, ESLint, Prettier, Netlify

**Concepts:** REST API consumption, async/await, rate limiting, debouncing, Clean Code, DRY, TypeScript generics

### PROJECTS

**Crate - music discovery and collection app**

*React, TypeScript, Tailwind CSS v4, React Router, public MusicBrainz API*

- API layer built around a generic mbFetch<T> helper that centralises the base URL, HTTP error handling and compliance with the MusicBrainz rate limit (one request per second) through a request queue.
- Search with 500 ms debouncing and four explicitly handled states (idle, loading, error, success), including loading skeletons and dedicated messages for empty results and failures.
- Album collection shared across pages via the Context API and a custom hook, persisted to localStorage under prefixed keys.
- Accessibility: side menu marked inert while closed, Escape to close, aria-label and aria-current, visible focus states for keyboard navigation.
- Responsive UI: 1/2/3 column grid and a menu that, depending on viewport width, overlays the content, pushes it aside, or appears in the free space.

**GameTrack - played games tracker**

*React, Vite, Tailwind CSS, React Router, Vitest, localStorage - deployed on Netlify*

- Multi-page application with locally persisted state, covered by unit tests written in Vitest.

**Match 3 Game**

*Vanilla JS, HTML5, CSS3, Web Audio API*

- Match-3 puzzle game written entirely in vanilla JavaScript with no external libraries; Fisher-Yates shuffle for fair board generation; real-time scoring and synthesised sound effects.

**URL Shortener**

*Vanilla JS, REST API, HTML5, CSS3*

- Single-page application that shortens URLs through an external REST API, handling asynchronous requests, errors and user feedback.

Other projects: Dog Glossary (REST API, client-side search and filtering), Virtual Piano (Web Audio API, real-time tone synthesis), an accessibility-focused website for visually impaired users, and a Clean Code refactor of a legacy codebase.

### EDUCATION

BSc - Business Informatics - Bucharest University of Economic Studies (ASE), CSIE - in progress

### COURSES AND CERTIFICATIONS

- Clean Code Academy - naming conventions, single-responsibility functions, DRY / KISS / YAGNI principles.
- Clean Code Academy - detecting code smells and refactoring; unit testing with Jest; ESLint and Prettier.

### LANGUAGES

Romanian - native | English - fluent (C1/C2)
